

There are tens of thousands of machine shops, or Job Shops, in the United States. Together, they employ more than 262,000 Americans and add nearly \$34 billion to the nation's economy.*

* U.S. Census Bureau, 2006 Annual Survey of Manufacturers (NAICS 332710)

Castrol Industrial and its Distributor Community now provide Job Shops with a solution specially designed for their unique needs.

These shops typically perform a variety of machining operations for different industries using a wide range of materials. As a result, they face diverse operational and metallurgical challenges. Additionally, their customers often demand short production runs and fast turn-arounds, and they must be able to customize and deliver high-quality end-products.

Until recently, no single manufacturer offered a selection of products and services designed to meet their unique metalworking fluid and lubricant needs. Rather, job shops were forced to use products and services designed for larger production plants, which often did not address their most common problems.

Castrol's **Job Shop Offer** is specifically designed to:

- increase finished product quality
- reduce costs and risks
- provide the fastest, most streamlined operation possible
- matched by unrivaled on- and off-site technical support.

This focused offer is designed to deliver against three specific targets:

- to deliver a full and **flexible product range** to enhance productivity and reduce risk,
- to provide the **technical support** required to solve problems rapidly and optimize productivity, and
- to ensure **reliable product supply** from local Distributors.

For all the specifics of this offer, visit www.castroljobshop.com.
